

Eurographics Symposium on Rendering 2022

– Symposium Track –

Prague, Czech Republic & Virtual

4 – 6 July 2022

Organized by

EUROGRAPHICS
THE EUROPEAN ASSOCIATION
FOR COMPUTER GRAPHICS

CHARLES UNIVERSITY

Program Co-Chairs

Abhijeet Ghosh, Imperial College London

Li-Yi Wei, Adobe Research

Conference Chair

Alexander Wilkie, Charles University

Proceedings Production Editor

Dieter Fellner (TU Darmstadt & Fraunhofer IGD, Germany)

Sponsored by EUROGRAPHICS Association

Table of Contents

Table of Contents	iii
Sponsors	v
Preface	vi
International Programme Committee	vii
Author Index	ix
Keynotes	x
Lighting	
Spectral Upsampling Approaches for RGB Illumination	1
<i>Giuseppe Claudio Guarnera, Yuliya Gitlina, Valentin Deschaintre, and Abhijeet Ghosh</i>	
SkyGAN: Towards Realistic Cloud Imagery for Image Based Lighting	13
<i>Martin Mirbauer, Tobias Rittig, Tomáš Iser, Jaroslav Křivánek, and Elena Šikudová</i>	
Sampling	
Planetary Shadow-Aware Distance Sampling	23
<i>Carl Breyer and Tobias Zirr</i>	
Volume Rendering	
Stenciled Volumetric Ambient Occlusion	29
<i>Felix Brüll, René Kern, and Thorsten Grosch</i>	
Material Modeling and Measurement	
Polarization-imaging Surface Reflectometry using Near-field Display	39
<i>Emilie Nogue, Yiming Lin, and Abhijeet Ghosh</i>	
Neural Rendering	
A Learned Radiance-Field Representation for Complex Luminaires	49
<i>Jorge Condor and Adrián Jarabo</i>	
NeuLF: Efficient Novel View Synthesis with Neural 4D Light Field	59
<i>Zhong Li, Liangchen Song, Celong Liu, Junsong Yuan, and Yi Xu</i>	
High Performance Rendering	
A Real-Time Adaptive Ray Marching Method for Particle-Based Fluid Surface Reconstruction	71
<i>Tong Wu, Zhiqiang Zhou, Anlan Wang, Yuning Gong, and Yanci Zhang</i>	

Table of Contents

Precomputed Discrete Visibility Fields for Real-Time Ray-Traced Environment Lighting	81
<i>Yang Xu, Yuanfa Jiang, Chenhao Wang, Kang Li, Pengbo Zhou, and Guohua Geng</i>	
Stylized Rendering	
GPU-Driven Real-Time Mesh Contour Vectorization	93
<i>Wangziwei Jiang, Guiqing Li, Yongwei Nie, and Chuhua Xian</i>	
HedcutDrawings: Rendering Hedcut Style Portraits	107
<i>Karelia Pena-Pena and Gonzalo R. Arce</i>	
Patterns and Noises	
Spatiotemporal Blue Noise Masks	117
<i>Alan Wolfe, Nathan Morrical, Tomas Akenine-Möller, and Ravi Ramamoorthi</i>	
Industry Track Papers	
Multi-Fragment Rendering for Glossy Bounces on the GPU	127
<i>Atsushi Yoshimura, Yusuke Tokuyoshi, and Takahiro Harada</i>	
Generalized Decoupled and Object Space Shading System	133
<i>Daniel Baker and Mark Jarzynski</i>	
GAN-based Defect Image Generation for Imbalanced Defect Classification of OLED panels	145
<i>Yongmoon Jeon, Haneol Kim, Hyeona Lee, Seonghoon Jo, and Jaewon Kim</i>

Best Paper Award Sponsor

Preface

Welcome to the 33rd Eurographics Symposium on Rendering, from July 4th to July 6th 2022 as a hybrid conference with physical gathering in Prague, Czech Republic and remote participation via video conferencing and messaging apps. The symposium has received 47 research-track submissions and 4 industry-track submissions, from which an international committee of experts selected 15 CGF (journal-track) papers, 12 symposium-track papers, and 3 industry papers for the final program. These papers represent a diverse range of topics in rendering, including lighting, illumination, sampling, noise, pattern, volumes, materials, machine learning, high performance computing, and stylized effects. Additional presentations include 6 CGF papers and 3 keynotes covering the frontier of rendering, such as black hole imaging, neural scene representation, and decentralized computing.

We hope you will enjoy both the technical content and social interactions of the symposium!

Abhijeet Ghosh and Li-Yi Wei
Program Co-Chairs

International Programme Committee

Barla, Pascal - Inria
Bénard, Pierre - Bordeaux University, Inria Bordeaux-Sud-Ouest
Bickel, Bernd - IST Austria
Bonneel, Nicolas - CNRS / UNIV. LYON
Brown, Rachel - NVIDIA
Christensen, Per - Pixar
Davis, Abe - Cornell University
d'Eon, Eugene - NVIDIA
Deschaintre, Valentin - Adobe Research
Dhillon, Daljit Singh - Clemson University
Didyk, Piotr - University of Lugano
Dischler, Jean-Michel - ICUBE - Université de Strasbourg
Dupuy, Jonathan - Unity Technologies
Frisvad, Jeppe Revall - Technical University of Denmark
Gingold, Yotam - George Mason University
Gkioulekas, Ioannis - Carnegie Mellon University
Gryaditskaya, Yulia - CVSSP, Surrey Institute for People-Centred AI
Hedman, Peter - Google
Heitz, Eric - Unity Technologies
Jarabo, Adrián - Universidad de Zaragoza
Jarosz, Wojciech - Dartmouth College
Khademi Kalantari, Nima - Texas A & M University
Kim, Min H. - KAIST
Lee, Seungyong - POSTECH
LeGendre, Chloe - Netflix
Lehtinen, Jaakko - Aalto University, NVIDIA
Li, Tzu-Mao - UC San Diego
Masia, Belen - Universidad de Zaragoza
Meyer, Mark - Pixar
Myszkowski, Karol - MPI Informatik
Novak, Jan - NVIDIA
Patney, Anjul - NVIDIA
Peers, Pieter - College of William & Mary
Pharr, Matt - NVIDIA
Ritschel, Tobias - University College London
Rushmeier, Holly - Yale
Sander, Pedro - HKUST
Serrano, Ana - Universidad de Zaragoza
Singh, Gurprit - Max-Planck Institute for Informatics, Saarbrücken
Sun, Qi - New York University
Sýkora, Daniel - CTU in Prague, FEE
Tong, Xin - Microsoft Research Asia
Vining, Nicholas - NVIDIA

International Programme Committee

Wang, Beibei - Nanjing University of Science and Technology

Weidlich, Andrea - NVIDIA

Weyrich, Tim - Friedrich-Alexander University Erlangen-Nürnberg (FAU)

Wong, Tien-Tsin - The Chinese University of Hong Kong

Xu, Zexiang - Adobe Research

Yan, Ling-Qi - UC Santa Barbara

Keynote

Beyond the First Portrait of Our Milky Way's Black Hole

Katie Bouman

Abstract

As imaging requirements become more demanding, we must rely on increasingly sparse and/or noisy measurements that fail to paint a complete picture. Computational imaging pipelines, which replace optics with computation, have enabled image formation in situations that are impossible for conventional optical imaging. For instance, the first black hole image – published in 2019 of the black hole in the M87 galaxy – and the recent second portrait of our Milky Way's supermassive black hole published in 2022, were only made possible through the development of computational imaging pipelines that worked alongside an Earth-sized distributed telescope. However, remaining scientific questions motivate us to improve this computational telescope to see black hole phenomena still invisible to us. This talk will describe how the first images of a black hole were computationally captured, and discuss how we are developing techniques that will allow us to extract the evolving structure of our own Milky Way's black hole over the course of a night, perhaps even in three dimensions, in the future.

Short Biography

Katherine L. (Katie) Bouman is an assistant professor in the Computing and Mathematical Sciences, Electrical Engineering, and Astronomy Departments at the California Institute of Technology. Before joining Caltech, she was a postdoctoral fellow in the Harvard-Smithsonian Center for Astrophysics. She received her Ph.D. in the Computer Science and Artificial Intelligence Laboratory (CSAIL) at MIT in EECS, and her bachelor's degree in Electrical Engineering from the University of Michigan. She is a Rosenberg Scholar, Heritage Medical Research Institute Investigator, recipient of the Royal Photographic Society Progress Medal, and co-recipient of the Breakthrough Prize in Fundamental Physics.

Keynote

Efficient Neural Scene Representation, Rendering, and Generation

Gordon Wetzstein

Abstract

Neural radiance fields and scene representation networks offer unprecedented capabilities for photorealistic scene representation, view interpolation, and many other tasks. In this talk, we discuss expressive scene representation network architecture, efficient neural rendering approaches, and generalization strategies that allow us to generate photorealistic multi-view-consistent humans or cats using state-of-the-art 3D GANs.

Short Biography

Gordon Wetzstein is an Associate Professor of Electrical Engineering and, by courtesy, of Computer Science at Stanford University. He is the leader of the Stanford Computational Imaging Lab and a faculty co-director of the Stanford Center for Image Systems Engineering. At the intersection of computer graphics and vision, computational optics, and applied vision science, Prof. Wetzstein's research has a wide range of applications in next-generation imaging, display, wearable computing, and microscopy systems. Prior to joining Stanford in 2014, Prof. Wetzstein was a Research Scientist at MIT, he received a Ph.D. in Computer Science from the University of British Columbia in 2011 and graduated with Honors from the Bauhaus in Weimar, Germany before that. He is the recipient of an NSF CAREER Award, an Alfred P. Sloan Fellowship, an ACM SIGGRAPH Significant New Researcher Award, a Presidential Early Career Award for Scientists and Engineers (PECASE), an SPIE Early Career Achievement Award, a Terman Fellowship, an Okawa Research Grant, the Electronic Imaging Scientist of the Year 2017 Award, an Alain Fournier Ph.D. Dissertation Award, and a Laval Virtual Award as well as Best Paper and Demo Awards at ICCP 2011, 2014, and 2016 and at ICIP 2016.

Keynote

Rendering the Open Metaverse

Jules Urbach

Abstract

In the coming decade, rendering technologies will be at the forefront of a revolution in informatics. As we move from hypertext and hypermedia to a fully immersive metaverse built on complex interactive 3D scenes, the next generation of the web will be driven by rendering intensive applications. This talk will discuss how a decentralized and open global rendering system is foundational for disruptive services and platforms to evolve from the post-mobile world of immersive computing. It will examine the use of rendering in web3 applications such as NFTs (non-fungible tokens) and explore how OTOY's Render Network is working to achieve the aims of an open, decentralized metaverse.

Short Biography

CEO and founder of RNDR — a decentralized rendering software that uses the Ethereum blockchain for distributed cloud rendering of digital graphics and special effects — is a pioneer in computer graphics, streaming, and 3D rendering, with more than 25 years of industry experience. His company is building the foundation for next-level metaverse graphics, allowing individuals to create renders and other works at the same level as Hollywood studios.
