Figure 1: Comparisons of different temporal resolutions $N \in \{1, \ldots, 5\}$ for positive advection time $\tau = 10$. $N$ grows from 1 (left) to 5 (right) for our method and grows from 1 (top) to 5 (bottom) for Agranovsky et al.

Figure 2: Comparisons of different temporal resolutions $N \in \{1, \ldots, 5\}$ for negative advection time $\tau = -10$. $N$ grows from 1 (left) to 5 (right) for our method and grows from 1 (top) to 5 (bottom) for Agranovsky et al.
