## Student Recruitment Email

Hello,

We are working on a project that explores how different modalities such as visualization, text, and speech can influence user decisions around data uncertainty.

We've implemented two prototypes that exhibit data uncertainty information across multiple modalities. We are looking for user feedback on these prototypes to derive insights for refining future multimodal interface design. Participating in our study would require a 30-45 minute session, where you'll perform a series of short tasks and share feedback on your experience. Participants will receive a \$20 Amazon gift card as compensation. All data collected will be anonymized.

## Professional Recruitment Email

Hi there,

My intern and I are working on a project that explores how different modalities such as visualization, text, and speech can influence user decisions around data uncertainty.

We've implemented two prototypes that exhibit data uncertainty information across multiple modalities. We are looking for user feedback on these prototypes to derive insights for refining future multimodal interface design. Participating in our study would require a 30-45 minute session over Zoom, where you'll perform a series of short tasks and share feedback on your experience. All data collected will be anonymized.
