

## (375) Uffizi Touch® Cloud for education

Author(s): *Paolo de Rocco, Marco Cappellini, Paolo Romoli*

Institution(s): *Centrica srl, ITALIA*

"Uffizi Touch® Cloud is a cloud service that can be accessed through an interactive whiteboard at schools or at other educational institutions. The functionalities are the same ones present in Uffizi Touch® installation. Through an interactive whiteboard a Professor or a student can choose a different "itinerary" to explore Uffizi Gallery (artist name, title, museum room, timeline, themes). More than 1.100 artworks of the Uffizi Gallery and the Vasari Corridor, and 100 artworks preserved in the deposits are available. Once a work of art is chosen it is possible to learn about the work of art through the historical description, visualize it in every detail at very high resolution (images have a size between 40 Megapixel and 10 GigaPixel). All enabling technologies have been developed by Centrica (more info at <http://www.uffizitouch.it/category/cloud/?lang=it>). Uffizi Touch® is a product designed and developed by Centrica that has signed an agreement with the Polo Museale Fiorentino.
